Reviews

Thorough guideline! Its this type of good read. It is really simplistic but shocks from the 50 percent from the publication. It is extremely difficult to leave it before concluding, once you begin to read the book.

(Sallie Wiegand)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 278 pages. OCLC Number: (OCoLC)153976374 Subject: Architecture and energy conservation -- Research -- United States. Excerpt: . . . components. Installing both interior and exterior air-barrier systems can address the weaknesses 3 of each. The air leakage target should be less than 0. 25 CFM50 (ft min at 50 Pa) per square foot of thermal envelope area. The approach to rainwater control is to shed water by layering wall materials in such a way that water is directed downward and outward from the building. This principle applies not only to walls, but to assemblies such as roofs and foundations, as well as to the components that can be found in walls, roofs, and foundations, such as windows, doors, and skylights. When using slab-on-grade construction in Mixed-Humid climates, it is recommended that the concrete slab be thermally isolated from the ground and outdoor air. Passive sub-slab ventilation is recommended to reduce atmospheric air pressure soil gas drivers. Crawlspace may be conditioned by insulating the crawlspace walls and supplying conditioned air either via a dedicated duct or via transfer air from the house with a continuously operating exhaust fan in the crawlspace. Alternatively, crawlspaces may be vented and insulated above the crawlspace if the ducts are located elsewhere. The recommended approach for basements includes insulating and conditioning the basement. Interior rigid-foam insulation is the insulation system of choice for both basement and crawlspace walls because it is not water sensitive. As long as there is no ductwork planned for the attic space, the optimum approach to roof insulation involves blowing insulation on the top surface of ceiling gypsum board. When possible, raised heel roof trusses should be used so that at least six in. of ceiling insulation is...
