

## Mathematical Foundations of Computer Science 1986

Filesize: 1.11 MB

### ***Reviews***

*A must buy book if you need to adding benefit. I am quite late in start reading this one, but better then never. Its been designed in an exceptionally easy way in fact it is only after i finished reading this publication where in fact modified me, alter the way in my opinion.*  
**(Prof. London Gerlach)**

DOWNLOAD

Springer Aug 1986, 1986. Taschenbuch. Book Condition: Neu. 235x155x35 mm. This item is printed on demand - Print on Demand Titel. Neuware - Why sometimes probabilistic algorithms can be more effective.- Recent results in the theory of rational sets.- Partial interpretations of higher order algebraic types.- Kinds of context-free languages.- Algebraic theory of module specifications with constraints.- A semantical model for integration and modularization of rules.- Parallel arithmetic computations: A survey.- An approach to proof checker.- The promise of electronic prototyping.- Systolic arrays: Characterizations and complexity.- Geometric location problems and their complexity.- Developing implicit data structures.- Higher-order arrays and stacks in programming. An application of complexity theory to logics of programs.- Deterministic simulation of idealized parallel computers on more realistic ones.- Relational specifications and observational semantics.- Efficient testing of optimal time adders.- Properties of complexity measures for PRAMs and WARMs.- Iterative systems of equations.- Polynomial complexity of the Newton-Puiseux algorithm.- Unique decipherability for partially commutative alphabet (extended abstract).- The equivalence of finite valued transducers (on HDTOL languages) is decidable.- A fast parallel algorithm for six-colouring of planar graphs.- Quicksort without a stack.- Towards an efficient merging.- Homomorphic realization of automata with compositions.- Refined bounds on the complexity of sorting and selection in  $d$  - dimensional space.- On the inherent combinatorial complexity of geometric problems in  $d$  - dimensional space.- The evolution of two stacks in bounded space and random walks in a triangle.-  $P$ -genericity and strong  $p$ -genericity.- Fibonacci numeration systems and rational functions.- Safe implementation equivalence for asynchronous nondeterministic processes.- Grammars with context dependency restricted to synchronization.- Some improved parallelisms for graphs.- A complete inference system for an algebra of regular acceptance models.- Nondeterministic Turing machines with modified acceptance.- Remark on the power of compass.- Regular chain code picture languages of nonlinear descriptonal complexity.- An analysis of the nonemptiness problem...
